- Talus fracture are rare
- Talus fractures have high complication rates.
- The bone loss is an obstacle to internal fixation.
- Pain is managed by fusion,
- Circular ring external fixation fusion technique was described for Talar fractures complicated by AVN and OM

In our study – we have utilized **primary** Tibio-Calcaneal Distraction Arthrodesis for complicated Talar FX, before OM and AVN occur.

COMPLICATIONS

- 3 Patients
 - developed **Talo-Navicular pain** within 11 to 18 months
- Minor postoperative events:
 - *Pintract infecation treated by ABx*
 - Wound dehiscence
 - included leg length discrepancy

16-17 MAGGIO 2025

DISCUSSION

- Talo-Calcaneal Distraction Arthrodesis can be used **for complex talar fractures.**
 - Even as a primary operative procedure
- A unique long-term complication is **Talo-Navicular** pain
 - We are considering preventive primary Talo-Navicular arthrodesis
